QUESTIONS 8 / 8 completed

Rectangle

RECTANGLE

Write a program that calculates the area of a rectangle given its length and width.
Problem Description:
Write a program that calculates the area of a rectangle given its length and width. The program should prompt the user to enter the length and width of the rectangle as input, then calculate the area and print it to the console.

Specifically, the program should take two numeric inputs from the user, one for the length and one for the width of the rectangle. It should then calculate the area of the rectangle using the formula: area = length * width. Finally, the program should print the calculated area to the console.

Sample Input and Output:

Example 1:
Input:
Length: 5
Width: 10

Output:

PROGRAM EDITOR

C

Run Save

```c
#include <stdio.h>
#include <stdlib.h>
#include <string.h>

int main() {
    char a[50], b[50], buf[64];
    double length, width, area;

    scanf("%s %s", a, b);

    length = atof(a);
    width = atof(b);
    area = length * width;

    if (strchr(a, '.') == NULL && strchr(b, '.') == NULL) {
        printf("The area of the rectangle is: %d\n", (int)area);
    } else {
        snprintf(buf, sizeof(buf), "%g", area);
        if (strchr(buf, '.') == NULL && strchr(buf, 'e') == NULL
            strcat(buf, ".0");
        printf("The area of the rectangle is: %s\n", buf);
```

OUTPUT

```
The area of the rectangle is: 0
```
